

SafetyZone INSIGHT provides visualization of COVID-19 test result data on a localized map.

SAFETYZONE INSIGHT CAN DISPLAY AGGREGATE DATA PER STATE, COUNTY OR ZIP CODE, AND WHEN SPECIFIC ADDRESSES ARE AVAILABLE, IT CAN PINPOINT THE LOCATION OF TEST RESULTS.

Laboratories can view their own uploaded data along with all of the specifics they have provided - including patient information.

About SafetyZone

SafetyZone is a centralized reporting hub that provides a total solution to securely collect and share healthcare data. A key feature of the platform is the aggregation of curated, anonymized COVID-19 test data. SafetyZone gives healthcare professionals actionable data that can be used to make informed decisions in real time, providing insights into overall community health and the impact of COVID-19 in their region.

SafetyZone supports automated and manual uploads of data in any format in a highly secure and HIPPA-compliant manner. Labs have the ability to review their uploaded data before submitting to the SafetyZone Insight system. SafetyZone utilizes Reprivata's Community of Trust™ for cybersecurity, ensuring patient data is not only secure but also meets privacy requirements worldwide.

SafetyZone was created to facilitate the Global Health Crisis Coordination Center's (GHC3) efforts to coordinate data aggregation in the face of the COVID-19 pandemic. GHC3 serves as a coordinating hub to share information and mobilize private sector resources to support public health response to global health crises.
